The Protected Premises

The Communication Method

The Monitoring Station

Certificate

BURGLARY PROTECTION ULC CERTIFICATION

Three easy steps help you define the protection needed

Specify the extent of protection* of the premises:

Level 1 – All *accessible* openings, fixed and moveable (windows, doors, transoms, skylights).

Level 2 – Same as 1, plus *inaccessible* moveable openings.

Level 3 – Same as 2, plus *party walls*, floors, ceilings.

Level 4 – Same as 3, plus *inaccessible fixed* windows and skylights and all ceilings, walls and floors enclosing premises.

*Note – Each level of protection may be achieved by alternative methods per CAN/ULC-S302.

Specify the communication level:

Different methods are available, ranging from a digital dialer to very high-security dedicated lines. Each level of communication has a relative amount of security from attempts to disable the connection between the premises and the station. The choice of communication level should be consistent with the risk at the protected premises.

Level 0 – No line security; for example, dialers, radio link (one-way communication).

Level I – Line is dedicated and continuously supervised but has many customers sharing this supervision.

Level II – As Level I, but can identify which subscriber is affected; simple compromise is detected within six minutes.

Level III – As Level II, but with substitution of subscriber's equipment detected within three minutes; introduction of phony data and jamming signals detected.

Higher levels of protection are available, primarily for the protection of financial institutions.

Select one of these three monitoring classifications:

Central Station: These companies provide monitoring services, plus installation, annual inspection and maintenance, plus guard service.

Monitoring Station: These companies provide monitoring services, plus installation, annual inspection and maintenance.

Shared Service Monitoring: These companies provide monitoring only. In conjunction with...

Shared Service Installation: These companies provide installation, annual inspection and maintenance only.

The ULC Certificate verifies that the required protection is:

- In place,
- Up to specification,
- Working properly,
- Under contract to be kept working,
- Subject to ULC follow-up service audit (third-party verification).

The ULC Certificate means:

- The installation meets the security level specified,
- The equipment meets National Standards of Canada,
- The system is reliably monitored,
- The claims made by the company have the benefit of third-party verification by an on-going ULC audit.
